Projects

1. HUBPOINT
GitHub 🔗 | *Deployed* 🔗
It is a customer relationship management (CRM) website that provides app services, marketing, and advertisement tools.
Features :
- Home, signup, and login pages
- OAuth functionality
- Product page with search, filter, and sort functionality
- Single app details page with review search and sort functionality

Tech Stack :
React JS | Redux | Thunk | Chakra UI | MongoDB | Node JS | Express JS | Passport JS | JWT | Mongoose | GitHub

Areas of responsibility :
- Worked entirely on the backend and created authentication and authorization routes, secure admin and product routes with search, filter, and sort functionality in the backend
- Helped to implement oauth functionality in the backend

A collaborative project built by a team of five members and developed in 6 days.

2. MYGLAMM CLONE
GitHub 🔗 | *Deployed* 🔗
MyGlamm is an Indian e-commerce company that sells cosmetics and personal care products.
Features :
- Home, login, product, product details, checkout summary, payment pages
- Add-to-cart functionality
- Payment gateway functionality

Tech Stack :
React JS | Redux | Thunk | Firebase | Chakra UI | React-Router | Axios | Json-Server | Render | GitHub

Areas of responsibility :
- Built the home page and responsive admin pages
- Implemented add, update and delete product functionality for admin

A collaborative project built by a team of five members and developed in 6 days.
